

2.4.5 Priority and Actuator Control System

1.0 Description

The priority and actuator control system (PACS) is a safety-related system.

The PACS provides the following safety-related functions:

- Prioritizes actuation requests from I&C systems.
- Performs essential equipment protection.
- Performs drive actuation.
- Performs drive monitoring.

2.0 Arrangement

2.1 PACS equipment is located as listed in Table 2.4.5-1—Priority and Actuator Control System Equipment.

2.2 Physical separation exists between the four divisions of the PACS.

2.3 Physical separation exists between Class 1E PACS equipment and non-Class 1E equipment.

3.0 Mechanical Design Features

3.1 Equipment identified as Seismic Category I in Table 2.4.5-1 can withstand seismic design basis loads without loss of safety function.

4.0 I&C Design Features, Displays and Controls

4.1 Protection system (PS) signals received by each priority module override other signals received by the priority module.

4.2 Electrical isolation is provided on connections between Class 1E PACS equipment and non-Class 1E equipment.

4.3 Class 1E PACS equipment can perform its safety function when subjected to electromagnetic interference (EMI), radio-frequency interference (RFI), electrostatic discharges (ESD), and power surges.

4.4 The input wiring from other I&C systems to the PACS is properly connected.

4.5 The capability for testing of the PACS is provided while retaining the capability of the PACS to accomplish its safety function. PACS divisions in test are indicated in the MCR.

4.6 Locking mechanisms are provided on the PACS cabinet doors. Opened PACS cabinet doors are indicated in the MCR.

- 4.7 The equipment for each PACS division is distinctly identified and distinguishable from other identifying markings placed on the equipment, and the identifications do not require frequent use of reference material.
- 4.8 The PACS provides a position indication signal to the safety information and control system (SICS) for each containment isolation valve (Type B post-accident monitoring (PAM) variable) listed in Table 2.4.5-2.
- 4.9 Non-Class 1E PACS communication module associated with Class 1E equipment will not cause a failure of a priority module when subjected to EMI, RFI, ESD and power surges.
- 4.10 The capability of 100% combinatorial testing of the PACS priority module is provided to preclude a software common cause failure.

5.0 Electrical Power Design Features

- 5.1 Class 1E PACS components are powered from a Class 1E division in a normal or alternate feed condition.

6.0 System Inspections, Tests, Analyses, and Acceptance Criteria

Table 2.4.5-2 lists the PACS ITAAC.

Table 2.4.5-1—Priority and Actuator Control System Equipment

| Description | Tag Number ⁽¹⁾ | Location | Seismic Category | IEEE Class 1E ⁽²⁾⁽³⁾ |
|---------------------------|---------------------------|----------------------|------------------|----------------------------------|
| PACS Cabinets, Division 1 | 30CLE6 | Safeguard Building 1 | I | 1 ^N 2 ^A |
| PACS Cabinets, Division 2 | 30CLF6 | Safeguard Building 2 | I | 2 ^N 1 ^A |
| PACS Cabinets, Division 3 | 30CLG6 | Safeguard Building 3 | I | 3 ^N 4 ^A |
| PACS Cabinets, Division 4 | 30CLH6 | Safeguard Building 4 | I | 4 ^N 3 ^A |

- 1) Equipment Tag numbers are provided for information and are not part of the design certification.
- 2) ^N denotes the division the component is normally powered from. ^A denotes the division the component is powered from when alternate feed is implemented.
- 3) The PACS communication module is classified as an associated circuit.
